

F C P A S

Fracture and Crack Propagation Analysis System

- ✓ **FCPAS** is a *general-purpose* finite element-based program for *three-dimensional analyses* of structures. It is proven to be *accurate*, employs *three-dimensional enriched elements* and allows computation of important fracture parameters such as *stress intensity factors* very *efficiently without any special mesh requirements* and *post-processing efforts*.
- ✓ Currently, models can be generated within **ANSYSTM** and their fracture analysis can be performed within **FCPAS** very *efficiently*.
- ✓ **FCPAS** is *free* to use for *education, research* and *scientific publications*. Usage for *commercial* purposes is *not permitted*.
- ✓ Its further development is continuing through a research project sponsored by TUBITAK.

Analysis Types

- ✓ Elastic stress
- ✓ Elastic/plastic stress
- ✓ Linear elastic fracture mechanics
- ✓ Submodel analysis of ANSYS models

Material Systems

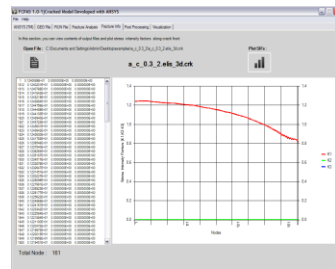

- ✓ Homogeneous isotropic
- ✓ Composite/multi-material
- ✓ Homogeneous orthotropic
- ✓ FGM isotropic
- ✓ Elastic/plastic isotropic

Loads

- ✓ Surface pressures
- ✓ Concentrated nodal forces
- ✓ Thermal loads
- ✓ Inertia loads
- ✓ Centrifugal loads

Boundary Cond.s

- ✓ Nodal displacements
- ✓ Nodal sets
- ✓ Skew boundaries
- ✓ Submodel boundary cond.s

If you are interested in obtaining a copy of FCPAS, please contact Dr. Ali O. Ayhan by writing to ayhan@sakarya.edu.tr.
